AI Usage Declaration - Practical Week 05

- **Project:** Personal Finance Manager
- **Group ID:** Group07
- **Report Period:** Start - Practical Week 05 (From: 2026-10-01 to 2026-11-06)

---

1. Team Summary Overview

No.	Student ID	Full Name	GitHub Username	AI Tool Used	Status / Declaration
1	25125042	Huỳnh Trần Gia Hân	`htghan-dotcom`	None	Did not use AI during this period
2	26125014	Nguyễn Bá Đạt	`DatJust`	None	Did not use AI during this period
3	26125015	Nguyễn Đức Thành Đạt	`hiepsimauhong`	None	Did not use AI during this period
4	26125036	Nguyễn Gia Khánh	`gkhanhhh-debug`	Gemini 2.5 Flash	Declared with full prompt log below

---

2. Individual Declarations

2.1. Member: Huỳnh Trần Gia Hân

- **Student ID:** 25125042
- **GitHub Username:** `htghan-dotcom`
- **Assigned Module:** Wallet Management & Data Persistence
- **Declaration:** I did not use any AI tools during this reporting period.

2.2. Member: Nguyễn Bá Đạt

- **Student ID:** 26125014
- **GitHub Username:** `DatJust`
- **Assigned Module:** Transaction Management & Shared Utilities
- **Declaration:** I did not use any AI tools during this reporting period.

2.3. Member: Nguyễn Đức Thành Đạt

- **Student ID:** 26125015
- **GitHub Username:** `hiepsimauhong`
- **Assigned Module:** Recurring Automation & Financial Statistics
- **Declaration:** I did not use any AI tools during this reporting period.

2.4. Member: Nguyễn Gia Khánh

- **Student ID:** 26125036
- **GitHub Username:** `gkhanhhh-debug`
- **Assigned Module:** Master Data & CLI Navigation Framework
- **AI Tool Used:** Gemini. Gemini 2.5 Flash, gemini.google.com, accessed on 29/10/2026

Prompt & Interaction Log:

Prompt 1: `CRUD operations trong c++ / các file cần tạo / cấu trúc thư mục project C++ trên github.`

> I use this to understand the fundamental concept of CRUD operations in C++ and how to structure a project directory cleanly (separating models, managers, and UI). I have read thoroughly and applied the project directory architecture into my repository.

Prompt 2: `Khai báo và cài đặt dữ liệu cho IncomeSource, ExpenseCategory và Wallet (dùng struct vs class, có cần getter/setter không).`

> I use this to learn how to define data models using C++ structs vs classes with encapsulation (getters/setters). I have evaluated the trade-offs and designed the data structures suitable for my assigned module.

Prompt 3: `Hướng dẫn chi tiết Bước 2: Viết lớp MasterDataManager quản lý CRUD cho các struct này.`

> I use this to understand how to manage std::vector of structs and implement CRUD algorithms (Create, Read, Update, Delete) in C++. I have reviewed the logic, understood vector operations and reference passing (auto&), and implemented the MasterDataManager logic.

Prompt 4: `[Attached code snippet of MasterDataManager] Hiện tại mới làm tới đây đã ổn chưa / sao nó báo lỗi include header file (.h vs .hpp).`

> I use this to review my code implementation, debug include path errors, and fix input validation issues. I have thoroughly analyzed the suggested fixes regarding std::cin.clear(), buffer flushing, and reference passing before refactoring my C++ code.

Prompt 5: `Master Data & CLI Navigation Framework (Main Dashboard, Multi-level Navigation Menu, Automated Routing Flow).`

> I use this to plan the step-by-step implementation for the console user interface and multi-level menu routing. I have read and understood the execution flow before writing the code.
